

Structural Framework for Area Protection

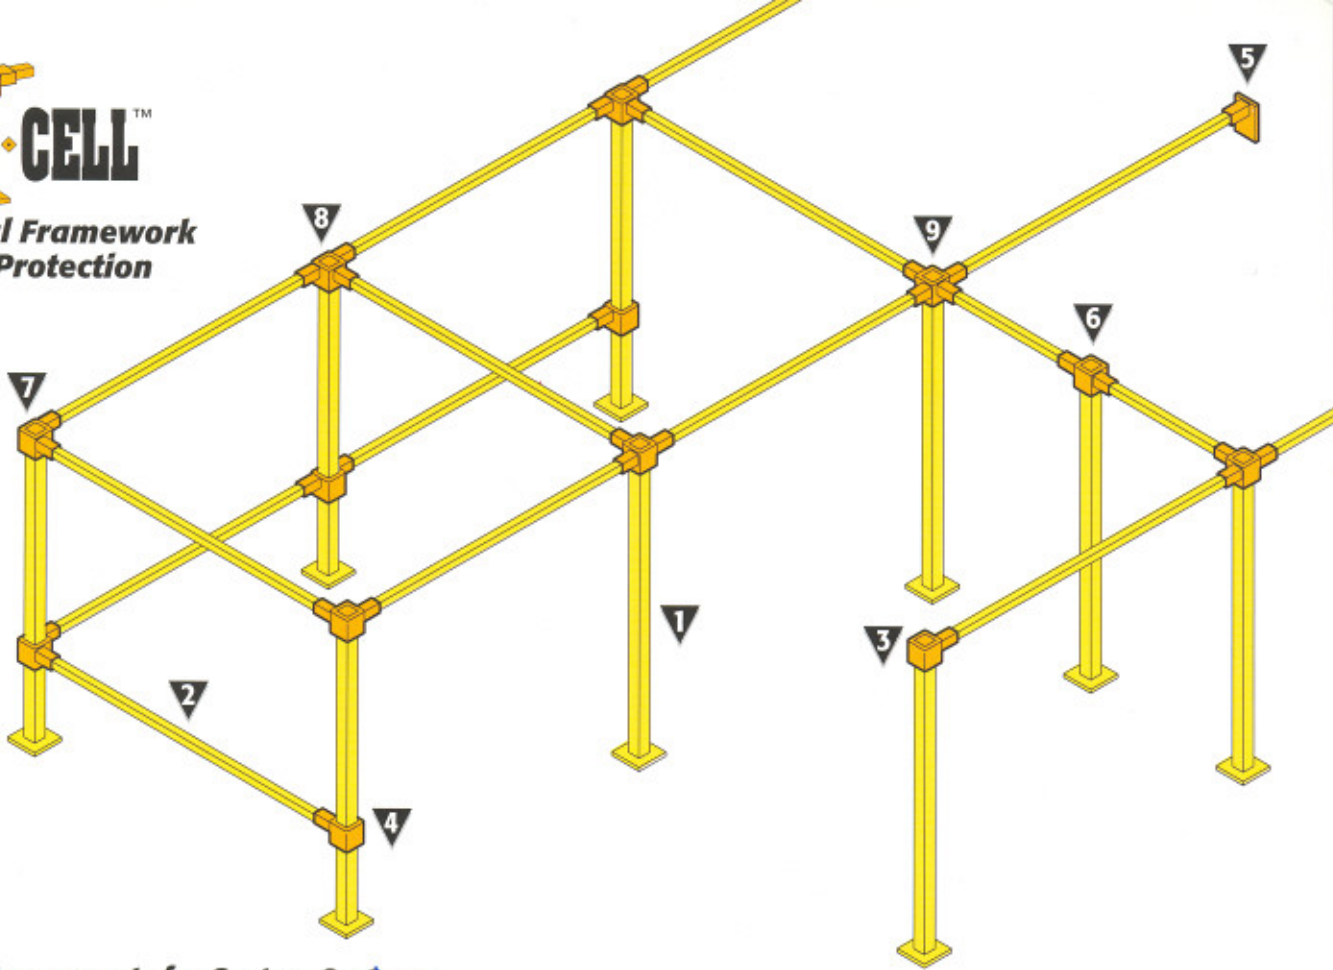

Simplicity – Versatility – Safety

- A system of rugged steel components, Saf-T-Cell is designed for fast and easy setup.
- Simple to expand or reconfigure for changing requirements.
- Use with a single curtain or create work cell environments.
- Ideal for automated areas.
- Can be used with any combination of standard and powered curtains.
- Bright yellow color creates awareness of potential dangers and provides neat, uniform appearance.
- Defined aisle-ways enhance traffic safety.

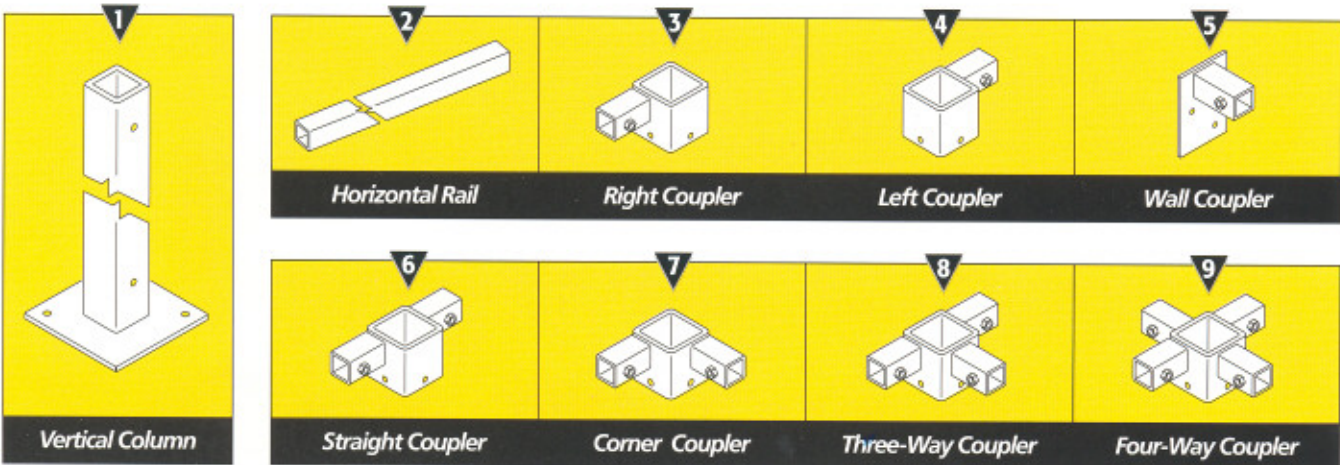

**Structural Framework
for Area Protection**

Versatile Components for Custom Systems

A variety of couplers are available for tailoring Saf-T-Cell framework to your unique floor plan.* 3" x 3" tubular columns in 8', 9' and 10' heights are combined with 12-gauge horizontal rails up to 10' long to provide support for traditional and powered strips or curtains. Optional middle rails serve as additional safety barriers.

*If your application requires custom components, consult a Frommelt Safety Products representative.

Count on the Area Protection Experts

For a single curtain or a departmental system, give Frommelt Safety a call. Our engineers can suggest the traditional or automated curtains that will best serve your needs. Then we'll design a Saf-T-Cell system with components customized to your specific floor plan, equipment and processes.
